

THIS PRODUCT IS NOT A PLANT FOOD

- For use in cleansing roots of inanimate slime that causes root rot, growth problems and low yields.
- Great for cleansing growing media, pots, hydroponic and pond parts.
- Recommended by growers and hydro system manufacturers.
- Barrier protection against root zone problems.
- Restores water clarity to ponds and fountains.
- Great for aquaponics
- Reduces NH_4 to NO_3 for better fish and aquatic life health.
- Keeps irrigation equipment and pumps clean and working properly.
- Z⁷ is skin contact safe.

Z⁷

2 PART ENZYME CLEANSER
for roots, equipment and growing mediums

Reach your plants potential by using Z⁷!

Z⁷ is unique to the horticultural market today. It is the biggest technology breakthrough in the last 50 years for growers and their plant's root zone!

Have you noticed nutrient deficiencies in leaves, powdery mildew, leaf curl, tip burn, slow growth, pH fluctuations, white mineral build-up, leaf drop, purple stems, browning roots, slimy roots, slimy tanks and more but can't explain why it's happening? These are all indicators of microscopic particles, insoluble minerals, and organic matter clogging the roots, tubes, sprayers and growing medium. These conditions are toxic to the plant and restrict osmosis causing the plant to be weak and insect prone. Z⁷ cures these problems and more!

Whether you're growing in soil or hydro, bad water is the biggest problem facing growers today. Z⁷ makes bad water great and eliminates root related problems fast. It is the great growth insurance policy that growers have asked for giving explosive root growth and plant health.

BEFORE Z⁷

**SAME PLANT
7 Days Later**

Directions for use:

Shake well before using. Each part has its own dosage.

Dosage:

Use 5ml Part 1 and 5ml Part 2 for every 10 gallons (37.854L) of nutrient solution or water. Use ½ ml of each part for every gallon (3.785L) of nutrient solution or water.

Your first time Z⁷ Application in Soil, Hydroponics or Aquaponics:

Mix Z⁷ with water and flush the plant's growing media very well until the EC/PPM in the last of the runoff from pot matches your water supply EC/PPM reading. Waiting two hours before feeding your plants will allow them to fully hydrate. Then, continuously use Z⁷ in feeding and or watering programs.

Deep Water Culture, Flood and Drain, Bubble, NFT:

Apply every 3-4 days to nutrient recirculation tank and at every nutrient tank change. Add to water or nutrients after pH adjustments.

Feed to Waste for Soil or Hydroponics:

Add at every nutrient tank change or top off. Add to water or nutrients after pH adjustments.

Indoor Soil:

Use when watering whenever possible.

Outdoor Soil:

Use when watering whenever possible. Water in to the maximum depth of roots.

Commercial Aquaponics:

Add every 3-4 days to water recirculation tanks and at every nutrient tank change. Z⁷ will benefit fish, plants, filters and equipment by keeping roots and equipment clean and free of inanimate organic slime. Reduces NH₄ to NO₃ for better fish and aquatic life health. Some clouding of water may occur as Z⁷ cleans equipment and balances the eco system.

Residential Ponds:

Add once or twice a month to water. Starting dosage of ¼ ml per gallon (3.785L) or 250ml per 1000 gallons. Dosage may increase to ½ ml per gallon (3.785L) as needed. Z⁷ will benefit fish, plants, filters and equipment by keeping roots and equipment clean and free of inanimate organic slime. Reduces NH₄ to NO₃ for better fish and aquatic life health. Some clouding of water may occur as Z⁷ cleans equipment and balances the eco system.
